

Our security camera systems provide functionality for you and your security system demands entirely. We provide a comprehensive range of **surveillance cameras** that include indoor security cameras appropriate for home and business applications with infrared surveillance cameras (also called day/night cameras) that work well in outdoor and other dark situations, and vandal proof security cameras designed to resist abuse.

Your home, your office, your store, your family -- these are just four reasons why you would want to purchase a video security camera. If you put your time, energy, and resources into these, why not take the extra step and insure what matters most to you? Video cameras designed specifically for surveillance give an extra measure of safety and security.

iPhone®, Android® and BlackBerry® users can use our free apps to watch live video from their cameras right on their mobile devices.

### Types of cameras available for video surveillance

There are a broad range of video surveillance cameras available. Understanding the differences will make it easier to determine which one suits you best.

**Fake security cameras** – These are not actual cameras. They are a very inexpensive alternative to purchasing an actual system. While these cameras can act as a deterrent, should something happen, you will not have a record of the event.

**Covert surveillance cameras** – These cameras look like regular items. A wall clock in a small store, a teddy bear in a baby's room, a potted plant by the front door—each one of these could very easily be a surveillance camera. You can record without anyone knowing, they are filmed.

**Wireless security cameras** – These offer more flexibility in set up. They are easy to install, can be moved easily, are often small, have no tell-tale wires, and are very discreet.

**Night vision security cameras** – These are ideal for any low-light areas, not just for the night time. The camera records in black and white in order to capture images best.

# BUSINESS/CONSUMER SECURITY FEATURES

We have solutions for all your needs!

## Versatile mounting

Place your camera almost anywhere using the included wall mount bracket. On a wall, under a soffit, or on a post.

## PC-free recording with microSD™

Record up to a week of video\* on the included 2 GB card—even when your PC is turned off. Upgrade to a larger card for months of recording time.

## Automatic PC backup

All video is backed up to your PC when it is connected to your network.

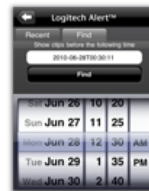

## Easy expansion

No need to limit your security coverage to a single camera. Our system is designed to be easily expandable. Mix and match up to six cameras—indoors and out.

## Remote management

Purchase optional premium services to manage your system remotely from Internet-connected computers.

## Mobile management

Get Logitech Alert Mobile Commander for your iPhone, BlackBerry or Android device.

## Free viewing over the Web

Log in to our secure site and watch live camera feeds from an Internet-connected computer, anywhere in the world.

## Free Mobile Viewer apps

iPhone®, Android® and BlackBerry® users can use our free apps to watch live video from their cameras right on their mobile devices.

## Free viewing on Google TV™ systems

From the next room or from across town, you can use the Google Chrome™ browser on your Google TV system.

## Weatherproof design

You can keep an eye on what's going on outside—rain or shine, summer or winter.

## Night vision

Infrared illumination turns on automatically in low light, allowing you to see in complete darkness—indoors or out.

## Motion-triggered recording

The smart camera automatically records video when it detects motion.
